Yassine Berrada Rekhami

+1 (218) 730-7306 | yrberrada@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Full-stack developer with a B.S. in Computer Science, building production systems (React, Next.js, TypeScript, Supabase/PostgreSQL, Node.js) end-to-end: from database schema and RLS design to pixel-accurate UI. Delivered real client products under deadline, with stakeholder management and on-site go-lives. Authorized to work in the U.S. under OPT.

EXPERIENCE

Go Optimal - Full-Stack Developer & Designer — 2025 – Present

React · TypeScript · Next.js · Supabase · PostgreSQL · Node.js · Tailwind · Lovable

- Built **Pulse**, internal Gantt project management platform; multi-view timeline (Week/Month/Day/Sprint/Agenda), drag-and-drop persistence via PostgreSQL, Google OAuth with RLS-scoped access, and continuous zoom; delivered MAD, PRD, TAD across two sprint cycles.
- Co-architected **Symphony Operations** for Allied Electric Sign ($16M/yr), a rule-based production scheduling engine across 11 departments; designed a 9-endpoint API surface (5 REST + 4 webhooks) bridging two Supabase projects with a field-mapping translation layer.
- Participated in 3-day on-site go-live at Allied's facility, supporting 14 dept. leads through UAT and live deployment; co-authored MAD v3.0 (40+ pages) used as source of truth across engineering and client teams.
- Built TGI Progressions Builder App: course player for 2 courses (G45X: 45 lessons / 6-week drip-lock; Beginnings: 30 lessons / 3 books), Admin CRUD with Supabase edge-function YouTube playlist import, and 3 marketing sales pages deployed to production.
- Resolved CSS class-prefix mismatch silently breaking all **@media 768px** breakpoints across 2 client pages; fixed a Supabase RLS silent failure and a React state race condition causing Gantt positions to drop on first render.

University of Minnesota Duluth - STEM Tutor — Apr 2021 – Nov 2022

Mathematics · Statistics · Physics · Chemistry

- Delivered 3–4 hrs/week of tutoring across math, stats, physics, and chemistry; completed SSP 3003 Peer Tutor Pedagogy training in tutoring strategies and communication.
- Improved student quantitative reasoning and coursework performance; built durable skill in translating complex technical concepts for non-technical audiences.

PROJECTS

Full-Stack Intranet Platform — 2025

- Engineered end-to-end with **Next.js, TypeScript, Prisma, PostgreSQL**; 14+ normalized relational models, 40% query complexity reduction, NextAuth RBAC (admin/manager/staff).
- Built modular React + Tailwind component library; reduced new-feature dev time by ~30% across the system.

JobFlow 'Notion Sync' API — Nov 2025

- Idempotent sync pipeline in **Go + FastAPI** mirroring job data into Notion API using external IDs; RESTful CRUD with schema validation, retry logic, and SQLite → PostgreSQL migration path.

AI Interactive Narrative Engine — 2025

- Next.js engine where the system adapts tone and emotional state via LLM prompts; scene-tree architecture (state machine + transitions) with persistent state and branching dialogue.

Baseball Player Database - MongoDB — Mar – Apr 2025

- Designed NoSQL schema + indexing for 50K+ player records; achieved 2× faster query performance via optimized aggregation pipelines.

Solar Wind Data Parser (C++) — Feb – Mar 2024

- Engineered parser for 1M+ NASA dataset entries; reduced query time by 40% with modular C++ OOP design (SOLID, factory patterns).

EDUCATION

University of Minnesota Duluth — 2019 – 2025

B.S., Computer Science - Minor in Mathematics

Coursework: Operating Systems, Database Management, Artificial Intelligence, Computer Architecture, Computer Security

TECHNICAL SKILLS

Languages: Go, Java, JavaScript, TypeScript, Python, C++, C#, SQL, Dart, Kotlin
Backend & APIs: Node.js, FastAPI, REST APIs, .NET/ASP.NET Core, Prisma ORM, NextAuth, Express.js, Supabase Edge Functions
Frontend & UI: Next.js, React, Tailwind CSS, Flutter, Android (Kotlin/Dart), Lovable
Databases: PostgreSQL, Supabase (RLS), SQLite, MongoDB, Firestore, Schema Design
Tools: Git/GitHub, Unix/Linux, VS Code, Firebase, AWS (S3, IAM), Azure, Figma, Lovable
Practices: Agile/Scrum, Technical Documentation (MAD/PRD/TAD), Stakeholder Management, AI-assisted Development, Prompt Engineering
